

AI Vocal Dataset Recording Brief

Singer's Guide for AI Voice Model Dataset Recording

1. Project Overview & Scope

Goal: To collect highly clean, dry vocal stems to train a private AI voice model.

Scope of Work (2 Parts - Totaling 60-90 minutes of pure vocals):

Part 1 (New Recording): Record the 70-track scale and technique script (Vocal_Recording_Score). This captures your vocal range across registers and pure vowels. (Approx. 15-30 minutes)

Part 2 (Provide Existing Vocals OR Record New Songs):

- Recommended: 15-20 songs (~45-60 min) - Best quality model
- Acceptable Minimum: 8-10 songs (~25-35 min) - Good quality

Below 8 songs is NOT acceptable - Insufficient data for natural AI synthesis

You can use past recording sessions (Covers, Originals). If you don't have enough clean stems, record new covers. These will NEVER be published; used strictly for AI training.

2. Language Requirements

Primary: Thai

Secondary: English (if comfortable)

Please inform our team which language(s) you will sing in. This affects phoneme mapping during training. Singing in both languages creates a more versatile AI model.

3. License & Rights

Commercial Buyout: The recorded vocals will be used to train a private AI Voice Model (Vocal Clone). By accepting this gig, the singer grants full buyout and commercial rights for the vocal data to be used in AI training. The data will not be redistributed as raw stems.

4. Technical Requirements

Format: .WAV format only

Quality: 44.1kHz or 48kHz, 24-bit, Mono channel

Gain Level: Peaks no higher than -6dBFS. Check your meter before and during each take.

100% DRY AUDIO (CRITICAL!):

- NO EQ
- NO Compression
- NO Reverb or Delay

- NO Auto-Tune or Pitch Correction

DO NOT apply any compression, limiting, or de-essing during or after recording.

Clean Recording: Zero background noise, no AC hum, no plosives or clipping.

Pop Filter: A pop filter or foam windscreen is REQUIRED to minimize plosive sounds.

5. Recording Guidelines

- 1. Mic Distance:** Maintain consistent distance (~15-20 cm / 6-8 inches) from the microphone throughout all sessions.
- 2. Consistency:** Sing with consistent energy and tone. Do not drastically change your vocal style between songs.
- 3. Articulation:** Pronounce consonants and vowels slightly clearer than normal.
- 4. Pitch & Rhythm:** Sing strictly on beat with the click track and follow the MIDI guide pitch. Default BPM for scales: 100 BPM.
- 5. Vocal Range (CRITICAL):** Transpose scales up and down to cover your ENTIRE range:
 - Chest Voice: ~20-30 minutes
 - Mix Voice: ~20-30 minutes
 - Head Voice / Falsetto: ~20-30 minutes
- 6. Syllable Continuity:** Sing Legato (connected) and Staccato (short, detached) styles clearly and separately.
- 7. Emotion & Dynamics:** Part 1 (scales): neutral, stable tone. Part 2 (songs): natural emotion with dynamic variety. Avoid extreme screaming/whispering.
- 8. Breathing:** Natural breaths are OK! The AI learns from them. Avoid harsh mic-bumping plosives.
- 9. No Overlaps:** ONE main vocal line per track. No harmonies or doubles in the same file.

6. File Naming Convention

Part 1 (Scales):

[SingerName]_P1_[Register]_[Number].wav

Examples: Nida_P1_Chest_01.wav, Nida_P1_Mix_05.wav

Part 2 (Songs):

[SingerName]_P2_[SongTitle]_vocal.wav

Examples: Nida_P2_LoveStory_vocal.wav

7. Deliverables

- Part 1:** Render continuous stems for the 70-track script. All files must start at 0:00.
- Part 2:** Provide dry vocal stems for 8-20 songs. Include lyrics (text files) or song titles for phoneme transcription.

8. File Delivery Method

Preferred: Upload to Google Drive and share the link.

Alternative: WeTransfer or any large-file sharing service.

Do NOT compress to .mp3 or .aac. Keep all files as .WAV

Organize into folders: Part1_Scales/ and Part2_Songs/

9. Timeline & Deadline

- Deliver all files within 14 days from agreement signing.
- If you need more time, inform our team at least 3 days before deadline.
- Partial submissions welcome - upload as you complete.

Pre-Recording Checklist

Pop filter / windscreen is in place

Room is quiet (AC off, no background noise)

DAW is set to: 48kHz, 24-bit, Mono

Input gain set so peaks stay below -6dBFS

All effects/plugins on recording channel are bypassed/off

Reviewed the Vocal_Recording_Score guide tracks
